NÃO BASTA SER SOFTWARE LIVRE...

Há um mito por trás o crescimento de softwares livres populares e suas respectivas **comunidades** de que isto ocorrerá organicamente... na verdade, há muito esforço para que este isso aconteça!

It Takes a Village: A Guidebook for

Programs Serving Cultural and Scientific Heritage:

https://www.lyrasis.org/technology/Documents/ITAV_Interactive_Guidebook.pdf

POR QUÊ DOCUMENTAR?

Para quem Documentar?
O quê Documentar?
Onde Documentar?

Pense num trem trabalhosooo!

Se as pessoas não sabem
porque seu projeto existe,
elas não vão usar.

Se as pessoas não sabem
como instalar seu projeto,
elas não vão usar.

Se as pessoas não sabem
como usar o seu projeto

...

elas não vão usar.

PARA QUEM DOCUMENTAR?

- Nem todo usuário tem conhecimentos técnicos

RTFM? How to write a manual worth reading
<https://opensource.com/business/15/5/write-better-docs>

PARA QUEM DOCUMENTAR?

- Nem todo usuário tem conhecimentos técnicos
- Nem todo usuário *não* tem conhecimentos técnicos

RTFM? How to write a manual worth reading

PARA QUEM DOCUMENTAR?

- Nem todo usuário tem conhecimentos técnicos
- Nem todo usuário *não* tem conhecimentos técnicos
- Nem todo usuário sabe ler Inglês

RTFM? How to write a manual worth reading

<https://opensource.com/business/15/5/write-better-docs>

PARA QUEM DOCUMENTAR?

- Nem todo usuário tem conhecimentos técnicos
- Nem todo usuário *não* tem conhecimentos técnicos
- Nem todo usuário sabe ler Inglês
- Nem todo usuário... entende referências de *Monty Python!*

4.7.2. Keyword Arguments

Functions can also be called using *keyword arguments* of the form `kwarg=value`. For instance, the following function:

```
def parrot(voltage, state='a stiff', action='voom', type='Norwegian Blue'):
    print("-- This parrot wouldn't", action, end=' ')
    print("if you put", voltage, "volts through it.")
    print("-- Lovely plumage, the", type)
    print("-- It's", state, "!")
```

ALGUMAS POSSIBILIDADES... QUE SÃO PAGAS

- Notion www.notion.so
- Nuclino www.nuclino.com
- GitBook www.gitbook.com

The screenshot shows the Notion interface with a sidebar on the left and a main content area on the right. The sidebar has a light gray background and contains the following items:

- Notion
- Quick Find
- All Updates
- Settings & Members (8)

WORKSPACE (highlighted in gray):

- Tasks
- Team (selected)
- Engineering
- Users & Operations
- Roadmap
- Insights + Memos
- CRM
- Meetings Notes
- To Read + Watch
- Recruiting Database
- Marketing

Bottom of the sidebar:

- Import
- Trash

The main content area has a dark header bar with the title "Team". Below the header, there are two yellow cartoon character avatars standing side-by-side. The main title "Team" is centered above a section titled "Roles & Hires". This section lists several items with icons:

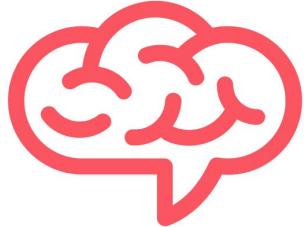

- New Hire Checklist
- Our Workflows
- Growth Hire Exercise
- Community & Support Exercise
- Marketing Hire Exercise
- Programmer Exercise
- Freelancers

On the right side of the main content area, there is a "Company & HR" section with a horizontal line separating it from the "Roles & Hires" section. This section also lists several items with icons:

- Reimbursement
- Time Off
- Company Trips
- VC Database
- Investors Updates

ALGUMAS POSSIBILIDADES... QUE SÃO PAGAS

Welcome!

A black and white photograph of a quadcopter drone flying in a dark environment, with light reflecting off its body and propellers.

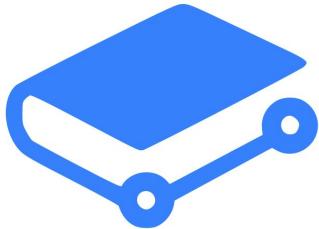

Welcome to DroneX, we're excited to have you on board! Here's a short list of things you can do on your first day.

Part I

- Pick up your starter package
- Meet with your buddy
- Meet your team
- Participate in the kick-off
- Check out the onboarding guides

ALGUMAS POSSIBILIDADES... QUE SÃO PAGAS

- Notion www.notion.so
- Nuclino www.nuclino.com
- GitBook www.gitbook.com

The screenshot shows the 'Realm Sync Docs' website. The header includes a logo, the title 'Realm Sync Docs', and navigation links for 'Sync', 'Server', 'Database', and 'realm.io'. A search bar is also present. The main content area features a heading 'Realm Sync Documentation' with a last updated timestamp ('Last updated 3 months ago') and a list of topics: 'What is Realm Platform?', 'Realm Sync - A Primer', 'Getting Started', 'Using Synced Realms', 'Realm Studio', 'Backend Integration & Services', 'GraphQL - Web Access', 'Troubleshooting & FAQs', and 'Server Docs'. Below this is a section titled 'ADDITIONAL RESOURCES' with links to 'Guide - How to Build a Production App with Realm Sync' and 'Code Samples'. To the right, a large heading 'Welcome to the Realm Sync Documentation Space!' is displayed, followed by a detailed description of the documentation's purpose and scope. Another section titled 'Navigating Our Documentation' provides information on the components of the Realm Platform and their informational needs.

Realm Sync Docs

Sync Server Database realm.io

Search...

Realm Sync Documentation

Last updated 3 months ago

Welcome to the Realm Sync Documentation Space!

This space contains all of the ins and outs of working with synced realms. This space of our documentation is relevant for both cloud and self-hosting users. You'll find basic code snippets and all of the details regarding working with your instance of the Realm Object Server. You will often find that this section of our documentation points back to the client SDK docs. You will need to use the two domains in conjunction.

Navigating Our Documentation

The Realm Platform is comprised of both mobile SDKs and server components. As a result, different users will have different informational needs. In this section, we'll try to highlight the areas that you'll find most helpful.

- Tempo
- Timless
- Truglass
- Vector
- WebPlatform
- WPtouch

Themes

A **theme** is a set of predefined colors and other such styles for a **skin**. In essence, a theme can be as simple as one CSS file. Skins on the other hand, always have some PHP code and whatnot, in addition to CSS (LEGS) and/or images and/or JavaScript code. This distinction is important in the MediaWiki world. Other projects written in the PHP programming language, such as phpBB or WordPress, use terms like "templates", "themes" and "skins" interchangeably to refer to various ways to change the look & feel of a website, but those words are **not** interchangeable in the MediaWiki world!

See the Theme extension's Infopage on [MediaWiki.org](#) for more info.

Custom, non-default themes by skin:

- BlueSky
 - Green
 - Grey
 - Red
 - White
- Bouquet
 - Pink Dogwood
 - Tiger Lily
- Dusk

DokuWiki

DokuWiki is a simple to use and highly versatile Open Source [wiki](#) software that doesn't require a database. It is loved by users for its clean and readable [syntax](#). The ease of maintenance, backup and integration makes it an administrator's favorite. Built in [access controls](#) and [authentication connectors](#) make DokuWiki especially useful in the enterprise context and the large number of [plugins](#) contributed by its vibrant community allow for a broad range of use cases beyond a traditional wiki.

Get started: [Download](#)

Why DokuWiki?

DokuWiki is a popular choice when choosing a Wiki software and has many advantages over similar software.

- Easy to install and use
- Low system requirements
- Built-in Access Control Lists
- Large variety of extensions
- Over 50 languages supported
- Device independent
- Open Source

Use Cases

Wikis are quick to update and new pages are easily added. Designed for collaboration while maintaining a history of every change, DokuWiki could be used as

- Corporate Knowledge Base
- Private notebook
- Software manual
- Project workspace
- CMS – intranet

Learn more about DokuWiki features

Customizing DokuWiki

We support customization on all levels of expertise. From easy configuration via the admin interface through downloading of templates and plugins to developing your own extensions.

- Configuration
- Plugins
- Templates (aka. skins/themes)
- Tips & tricks

[Read the development manual](#)

Our Community

A part of OpenSource is giving back to the community by getting involved. There are numerous of options to do that.

- Share your experience
- Do some wiki gardening
- Help plugin authors with documentation
- Help translate the DokuWiki interface
- Submit bugs and feature wishes
- Answer questions in the forum

[Get involved](#)

¹⁾ Please do not contact me for help and support – use the [mailinglist](#) or [forum](#) instead

READ THE DOCS

- Sincronização com GitHub e similares. 😊
- *reStructuredText* ou...Markdown. 😐
- Hospedagem por conta, ambiente de dev mais simplificado. 😊

The screenshot shows the left sidebar of the Read the Docs documentation site. At the top is a logo for "Read the Docs". Below it is a search bar labeled "Search docs". The sidebar is organized into several sections with links:

- FIRST STEPS**: Getting Started with Sphinx, Getting Started with MkDocs, Importing Your Documentation.
- GETTING STARTED**: Read the Docs features, Configuration File, Webhooks, Badges, Custom Domains, Connecting Your Account, Build Process, Versions, Support, Frequently Asked Questions.
- ADVANCED FEATURES**: Subprojects, Single Version Documentation, Privacy Levels, Localization of Documentation, User-defined Redirects, Automatic Redirects, Guides, Public API.
- ABOUT READ THE DOCS**: Contributing to Read the Docs, Roadmap, Google Summer of Code, Code of Conduct, Security, Privacy Policy, DMCA Takedown Policy, Policy for Abandoned Projects, Changelog, Read the Docs Team, Read the Docs Open Source Philosophy.

At the bottom of the sidebar, there is a "Read the Docs" button and a "v: stable" dropdown menu.

Read the Docs: Documentation Simplified

Read the Docs simplifies software documentation by automating building, versioning, and hosting of your docs for you. Think of it as *Continuous Documentation*.

Never out of sync

Whenever you push code to your favorite version control system, whether that is Git, Mercurial, Bazaar, or Subversion, Read the Docs will automatically build your docs so your code and documentation are always up-to-date.

Multiple versions

Read the Docs can host and build multiple versions of your docs so having a 1.0 version of your docs and a 2.0 version of your docs is as easy as having a separate branch or tag in your version control system.

Free and open source

Read the Docs is free and open source and hosts documentation for nearly 100,000 large and small open source projects in almost every human and computer language.

First steps

Are you new to software documentation or are you looking to use your existing docs with Read the Docs? Learn about documentation authoring tools such as Sphinx and MkDocs to help you create fantastic documentation for your project.

- **Getting started:** [With Sphinx](#) | [With MkDocs](#)
- **Importing your existing documentation:** [Import guide](#)

Getting started with Read the Docs

Learn more about configuring your automated documentation builds and some of the core features of Read the Docs.

- **Overview of core features:** [Read the Docs features](#)
- **Configure your documentation:** [Configuration reference](#) | [Webhooks](#) | [Badges](#) | [Custom domains](#)
- **Connecting with GitHub, BitBucket, or GitLab:** [Connecting your account](#)
- **Read the Docs build and versioning process:** [Build process](#) | [Handling multiple docs versions](#)
- **Troubleshooting:** [Support](#) | [Frequently asked questions](#)

Advanced features of Read the Docs

Read the Docs offers many advanced features and options. Learn more about these integrations and how you can get the most out of your documentation and Read the Docs.

Edit on GitHub

Daux.io is a documentation generator that uses a simple folder structure and Markdown files to create custom documentation on the fly. It helps you create great looking documentation in a developer friendly way.

Features

For Authors

- Auto Generated Navigation / Page sorting
- Internal documentation links
- CommonMark compliant
- Auto created homepage/landing page
- Multiple Output Formats
- Multiple Languages Support
- No Build Step
- Static Output Generation
- Table of Contents

For Developers

- Auto Syntax Highlighting
- Extend Daux.io with Processors
- Full access to the internal API to create new pages programatically
- Work with pages metadata

For Marketing

- 100% Mobile Responsive
- 4 Built-In Themes or roll your own
- Functional, Flat Design Style
- Optional code float layout
- Shareable/Linkable SEO Friendly URLs
- Supports Google Analytics and Piwik Analytics

Demos

This is a list of sites using Daux.io:

- With a custom theme:
 - Crafty
 - Pixolution flow
 - Soisy
 - Vulkan Tutorial
- With the default Theme
 - Daux.io
 - DoctrineWatcher
 - DrupalGap
 - ICADMIN: An admin panel powered by Codeigniter.
 - Invade & Annex 3 - An Arma 3 Co-operative Mission
 - Munee: Standalone PHP 5.3 Asset Optimisation & Manipulation
 - Nuntius: A PHP framework for bots

Table of Contents

- Features
- For Authors
- For Developers
- For Marketing

- Install
- PHP and Composer
- Docker
- Writing pages
- See your pages
- Serving files
- Export to other formats
- Configuration
- PHP Requirements
- Extensions
- Known Issues
- Support

DOCUSAURUS

- Sincronização com GitHub e similares. 😊
- Blog interno e páginas customizáveis. 😊
- Integração com o GitHub Pages! 😊
- Abas de código e syntax highlight. 😊
- Serviços de Tradução e Indexação terceiros 😢

Docusaurus 1.12.0

Docs Tutorial Users Blog GitHub A English Search

Custom Pages

You can add pages to your site that are not part of the standard docs or blog markdown files. You can do this by adding `.js` files to the `website/pages` directory. These files are React components and the `render()` is called to create them, backed by CSS classes, etc.

Customizing Your Home Page

The easiest way to get started customizing your home page is to use the example site that was [created](#) when you ran the [Docusaurus initialization script](#).

You can start your local server and go to <http://localhost:3000> to see what the example home page looks like. From there, edit the `website/pages/en/index.js` file and its various components to use the images and text you want for your project.

If you want your page to show up in your navigation header, you will need to update `siteConfig.js` to add to the `headerLinks` element. e.g.,
`{page: 'about-slash', label: 'About'}`,

Customizing Your Site Footer

Starting from the example `core/Footer.js` file that was [created](#) when you ran the [Docusaurus initialization script](#), edit the footer to include any links to pages on your site or other sites that you wish to have.

```
const React = require('react');

class Footer extends React.Component {
  render() {
    return null;
  }
}

module.exports = Footer;
```

WIKIJS 2.0

• TUDO •

The screenshot shows the official documentation for Wiki.js. At the top, there's a search bar and a logo. The main content area has a sidebar titled "TABLE OF CONTENTS" with sections like "Getting Started", "Administration", "User Guide", "Developers", "Modules", "Themes", "Translations", and "Contribute". Below the sidebar, there's a "LAST EDITED BY Administrator 07/27/2019" message and a set of sharing icons. The main content area features several sections: "Getting Started" (with a note about incomplete pages), "Administration" (listing Locales, Search Engines, Storage, and User Groups), "Modules" (listing Authentication, Locales, Editors, Logging, Rendering, Search Engines, and Storage), "Themes" (with a note about creating and publishing themes), "Translations" (with a note about reporting bugs and suggesting features), and "Contribute" (with a note about donating). A footer at the bottom right includes the copyright information "© 2019 requarks.io. All rights reserved. | Powered by Wiki.js".

Wiki.js
Official Documentation for v2

⚠ Documentation is being worked on! Some pages may be incomplete or not exist yet.

Getting Started

Wiki.js is quick and easy to install. You should be up and running in no time.

- Make sure you have read the [server requirements](#).
- Follow the quick and simple [installation guide](#).
- Using [Docker](#)? Use the [Docker installation guide](#) instead.
- Using [Heroku](#)? Use the [Heroku installation guide](#) instead.

Administration

Locales: Display the wiki in a different language or enable multilingual capabilities.

User Groups: Permissions and access rights.

Telemetry: Help Wiki.js developers understand crashes by enabling anonymous telemetry.

Troubleshooting: Solutions to common issues.

Modules

Modules greatly expand the capabilities of your wiki.

- Authentication: Configure how users can login and register to your wiki.
- Editors: Manage the various editors used to create content.
- Logging: Forward logs to external logging services.
- Rendering: Configure how content is parsed and rendered into its readable form.
- Search Engines: Manage the search capabilities of your wiki.
- Storage: Backup or sync the content of your wiki with external storage services.

User Guide

Tags & Categorization: Learn how to categorize your pages for an easier browsing experience.

Developers

Getting Started for Wiki.js development is your first step before making modules and themes.

Themes

- Create a Theme: Learn how to create your own theme.
- Publishing a Theme: Make your theme available to others!

Translations

- Translations: Contribute a new language or test new keys

Contribute

- Report a Bug: Help us squash those pesky bugs.
- Suggest a New Feature: We need your ideas!
- Donate: Make a small donation or become a sponsor of this wonderful project!

- Language highlighting

Guide

- Deploy
- Helpers
 - important content
 - General tips
 - Ignore to compile link
 - Set target attribute for link
 - Disable link
 - Github Task Lists
 - Image resizing
 - Customise ID for headings
 - Markdown in html tag
- Vue compatibility
- CDN
- Offline Mode(PWA)
- Server-Side Rendering(SSR)
- Embed Files

esome docsify

 Edit Document

Doc helper

docsify extends Markdown syntax to make your documents more readable.

important content

Important content like:

!> **** is money, my friend!

Time

is rendered as:

Time is money, my friend!

General tips

General tips like:

?> ... unit test

TODO

are rendered as:

TODO unit test

Ignore to compile link

Some time we will put some other relative path to the link, you have to need to tell docsify you don't need to compile this link. For example

[](/demo/)

link

It will be compiled to `link` and will be loaded `/demo/README.md`. Maybe you want to jump to `/demo/index.html`.

Now you can do that

[link](/demo/ ':ignore')

You will get `<a href="/demo/`link`` html. Do not worry, you can still set title for link
